+1 628-269-8661 | US Work Authorized via CPT and OPT (no sponsorship) | Willing to relocate

EDUCATION

Northeastern University, Boston, MA, USA

Expected Jun. 2027

Bachelor of Science in Computer Science, Minor in Mathematics

GPA: 3.83 / 4.00

Relevant Coursework: *Distributed Systems, Web Development, Artificial Intelligence, Software Engineering, Algorithms, Object-Oriented Design, Operating Systems, Programming in C++, Programming Languages*

PROFESSIONAL EXPERIENCE

Full Stack Engineer Co-op

Jan. 2026 – Present

Flexcar

Boston, MA, USA

- Replaced a risk management workflow on an external tool with an internal React and Ruby on Rails dashboard, letting the team act on failed risk checks directly in-app and cutting review time by 67%
- Hardened Stripe payment flow for adding secondary drivers to subscriptions by formalizing a state machine, eliminating ambiguous account states on failure and closing race conditions in concurrent activation events
- Discovered and resolved 2 legacy bugs in Flexcar’s risk evaluation logic that had silently skewed approvals and denials for ~4% of customers over 2 months—surfaced through code audit
- Drove resolution of a production issue blocking Apple verification emails, coordinating across Apple, AWS, marketing, and company leadership to restore signups for 3,000+ users

Software Engineer and Tech Lead (Part-time)

Jan. 2026 – Present

Generate Product Development Studio

Boston, MA, USA

- Built Toggo, a full-stack trip-planning iOS/Android app, in Go and React Native on a cross-functional team of 5 designers and 7 engineers; served as de facto frontend lead, assigning tickets and running QA code reviews
- Designed S3 image upload pipeline with adaptive quality/size compression (iterative 60-90% quality search under an 8MB cap, tiered Lg/Md/Sm variants) and built the React Native design system adopted across 14 screens
- Eliminated N+1 query patterns in **Go/PostgreSQL**, reducing endpoint latency from 3s to 0.5s for trip detail pages

Software Developer

Jun. 2025 – Aug. 2025

What’s The Word?

Remote

- Launched Stripe integration for 800+ users, enabling ticketing and driving the startup’s first revenue stream
- Boosted app performance by ~70% by optimizing queries, infinite scrolls, and implementing image caching
- Migrated the codebase from Flutter to React Native, accelerating development and aligning with team expertise
- Collaborated with 2 developers and 2 non-technical founders, providing technical input and delegating work

PROJECTS

Plonkstars | *Python, TypeScript, React, Flask, TailwindCSS, MySQL*

Feb. 2025 – May 2025

- Developed a geo-locating game that generated 48,000 page views by leveraging Google Maps Streetview API
- Reduced location generation time by 86% (from 15s to 2.1s) by implementing chunk-based coordinate generation, caching, and a fallback that accesses cached locations when generation attempts hit API call limits
- Boosted average playtime by 73% (from 25 to 44 minutes) after implementing one-click restart, customizable gameplay, and competition features—implemented based on user beta and usability feedback

High Card | *TypeScript, React, NodeJS, TailwindCSS, MongoDB*

Jan. 2025 – Feb. 2025

- Won “Best Startup Potential” award at FinHacks out of 125+ competitors after implementing and demoing a cashback comparison tool that helped users increase cashback by 33% via credit card benefits optimization

TECHNICAL SKILLS

Languages: Python, Ruby, TypeScript, JavaScript, HTML, CSS, Go, Java, Racket, C++, Kotlin, SQL

Frameworks: React, React Native, NextJS, NodeJS, ExpressJS, Ruby on Rails, Flask, TailwindCSS, Jest

Tools: MongoDB, MySQL, PostgreSQL, Supabase, Docker, AWS S3, AWS SES, Grafana, Sentry, Git, GitHub, Docker

Interests: Long-distance running, cooking omurice, rating bottled water, GeoGuessr, VTubers, Cosplay, Fashion
