Education

Northeastern University, Boston, MA, USA — Sep. 2023 – Jun. 2027

Bachelor of Science in Computer Science, Minor in Mathematics — *GPA: 3.83/4.00*

- **Relevant Coursework:** Object-Oriented Design, Algorithms, Artificial Intelligence, Computer Systems, Programming Languages, Distributed Systems, Information Retrieval, Software Engineering, Web Development

Experience

Full Stack Engineer Co-op — Jan. 2026 – Sep. 2026

Flexcar – car subscription commerce platform — *Boston, MA, USA*

- Took ownership of risk systems as primary engineer and built a React/Rails manual review tool, cutting review time **67%** and flagging **10,000**+ orders in 6 months, with thousands rejected for being fraudulent or high-risk
- Uncovered and resolved **2 legacy bugs** that had silently skewed the customer risk evaluation's approvals and denials for **4%** of customers over 2 months through code auditing
- Redesigned the Stripe payment flow for adding secondary drivers (**10,000+** enrolled) by formalizing a deterministic state machine, eliminating ambiguous failure states and concurrent-activation race conditions
- Drove the fix for a production issue blocking Apple verification emails, restoring sign-ups and communication to more than **5000+** users after implementing the fix and coordinating with Apple, AWS, marketing, and leadership
- Hardened email validation entry point for **100,000+** accounts, designing the logic and driving the implementation
- Took the initiative to mentor co-ops and authored an onboarding guide to the codebase and business domain

Software Developer — Jun. 2025 – Aug. 2025

What's The Word – event ticketing platform — *Remote*

- Launched Stripe integration for **800+** users, enabling ticketing and driving the startup's first revenue stream
- Cut app latency by **70%** by optimizing queries, infinite scrolls, and implementing image caching
- Spearheaded the migration from Flutter to React Native, accelerating workflow and aligning with team expertise

Projects

Boutline | Tech Lead at Generate — Sep. 2026 – Present

- Lead technical direction for a tournament platform replacing FencingTimeLive for fencing event management
- Own the full system design, technical scope, and database schema from client concept to production
- Manage and mentor 5 engineers, aligning task ownership with individual career goals and strengths

Toggo | Software Engineer at Generate — Jan. 2026 – Apr. 2026

- Directed frontend development for Toggo, a Go/React Native trip-planning app, owning ticket assignment and QA code reviews for a cross-functional team of 5 designers and 7 engineers
- Designed an S3 image upload pipeline with adaptive quality/size compression (iterative 60-90% quality search under an 8MB cap, tiered Lg/Md/Sm variants) and built the React Native design system adopted across 14 screens
- Reduced endpoint latency from **3s to 0.5s** for trip detail pages by eliminating N+1 patterns in Go/PostgreSQL

Plonkstars | Creator — Feb. 2025 – May 2025

- Launched a geo-locating game that generated **48,000** page views by leveraging Google Maps Street View API
- Slashed location generation time by **86% (from 15s to 2.1s)** by implementing chunk-based coordinate generation, caching, and a fallback that accesses cached locations when generation attempts hit API call limits
- Grew average playtime by **73% (from 25 to 44 minutes)** after implementing one-click restart, customizable gameplay, and competition features based on user beta and usability feedback

Technical Skills

Languages: Python, Ruby, TypeScript, JavaScript, HTML, CSS, Go, Java, Racket, C++, Kotlin, SQL
Frameworks: React, React Native, NextJS, NodeJS, ExpressJS, Ruby on Rails, Flask, TailwindCSS, Jest
Developer Tools: MongoDB, MySQL, PostgreSQL, Docker, AWS (S3, SES, EC2), Grafana, Sentry, Git, GitHub
Spoken Languages: English (Fluent), Thai (Fluent), Spanish (Intermediate)
